

The world's most widely used Student Placement Management Software

Professional, Organisation-wide Student Placement

Sonia provides a rock solid foundation to support student placements throughout your organisation. From the largest faculties placing thousands of students per year through to small schools that wish to record student-initiated placements. We know that every area of your organisation has its own terminology and placement rules – Sonia has the flexibility to handle them all.

Contact Planet Software to organise an online demonstration, to learn more about Sonia and how it manages student placement.

Sonia Can Help Busy Placement Staff

Sonia helps your team stay on top of placements and keep the stress level down. Your students will use Sonia to keep track of their placements, prerequisites and preferences – meaning fewer emails and phone calls.

Sonia helps you manage the organisations you deal with. Your relationship with an organisation is more than a name and address. You want to make sure that the placement providers and your students enjoy a rewarding placement experience. Students will be prepared with the right information and venues will be kept up to date with tailored emails, website and printed information.

Standard reports and flexible exports make it easy to satisfy requests for placement data and statistics.

If you are currently using Sonia, you are already licensed to use the latest version.

Work Integrated Learning (WIL) Support

Sonia is a fantastic choice for universities looking for an organisation-wide placement solution. While schools can keep and control their own terminology and business rules, Sonia allows placement providers to be shared across the organisation.

Potential placement providers can use the Sonia website to nominate themselves and provide the initial contact information.

These new venues can be tracked and processed in Sonia and eventually turned into qualified placement providers.

Only Sonia gives this flexibility and power to manage thousands of student placements simultaneously.

Sonia will import all of the contact and enrolment information about your students from your current student enrolment system.

Sonia's import flexibility means we can bring across any data in your student system - not just the basics. This might include next of kin information or perhaps prerequisite checks.

Sonia Key Features

- ▶ Enterprise power - Supports multiple schools
